

Operator Subspace Evolution: VQA Cost and $\dim(S)$ vs. Mixing Parameter

Werner: $\rho_W(p) = p|\Phi^+\rangle\langle\Phi^+| + \frac{1-p}{4}I$

Isotropic: $\rho_{\text{iso}}(f) = f|\Phi^+\rangle\langle\Phi^+| + \frac{1-f}{3}(I - |\Phi^+\rangle\langle\Phi^+|)$

Bell mixture: $\rho(p) = p|\Phi^+\rangle\langle\Phi^+| + (1-p)|\Psi^+\rangle\langle\Psi^+|$
